

## TRANSCRANIAL MAGNETIC STIMULATION (TMS)

Transcranial Magnetic Stimulation offers treatment options to those suffering from treatment resistant depression as well as other mental health conditions. rTMS is a non-invasive, advanced technology provided in an outpatient setting in the comfort of our new state-of-the-art TMS Services suite.

rTMS uses magnetic fields to stimulate targeted nerve cells in the brain that have been identified as underactive in certain conditions. TMS is a proven non-drug treatment shown to significantly improve symptoms of depression. During therapy, the individual is alert and able to resume normal activities immediately afterward. The decision to engage in rTMS is made by the patient and physician after discussing risks and benefits.

Most Insurance Plans, as well as Medicare Accepted.
